Letter of recommendation

Jan 19, 2026

To Whom It May Concern,

I am pleased to write this letter of recommendation for Patryk Raba, who has served as the Head of Quality Assurance at MOSTLY AI from 12 March 2025 to 16 January 2026. In my capacity as Chief Platform Officer, I had the privilege of managing Patryk and directly observing his impact on our business.

For Patryk, QA is not only about testing software, automation, or reporting bugs. He genuinely cares about the product and takes the time to understand it deeply. He has a holistic approach to quality and always looks beyond just functional testing. He brought a lot of experience into the team and introduced important QA concepts that we were not practicing before, which significantly improved our overall quality process.

Patryk is also a strong engineer at heart. He helped increase our efficiency by introducing AI agents for test automation, while still respecting the existing framework and discipline of the team. This allowed us to develop automated tests in parallel with feature development, which was a big improvement for our workflow.

Under his leadership, the QA team reduced the test execution time by 60%, which helped speed up our release process. They also expanded the test scope from UI and API tests in Playwright to full end-to-end tests in Python, as part of our shift-left initiative.

Beyond his daily responsibilities, Patryk is very active in the QA community. He regularly attends conferences and invests a lot in his personal development. He brings this knowledge back to the team and is always willing to help, even in areas outside his direct role. This attitude makes him not only a strong QA Manager, but also a great people manager and role model.

In summary, Patryk is a great colleague and a highly valuable professional. I am confident that he would be a strong contribution to any team or company he joins.

Sincerely,

Kerem Erdem, Chief Platform Officer, MOSTLY AI
